### DON'T BE MISLED

Maysville Citizens Should Read and  
Heed This Advice

Kidney trouble is dangerous and often fatal.  
Don't experiment with something new and untried.  
Use a tested kidney remedy.  
Begin with Doan's Kidney Pills.  
Used in kidney troubles 50 years.  
Recommended here and everywhere.

A Maysville citizen's statement forms convincing proof.

It's local testimony—it can be investigated.

Henry Callenstein, blacksmith, Poplar street, Maysville, says: "Doan's Kidney Pills are the best of kidney medicines. I have used different kinds and no other has ever equalled this one. When my kidneys were out of order and I had pain in my back, I heard of Doan's Kidney Pills and used them. They stopped the pains and my kidneys became strong. The cure has been permanent."

Price 50c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that cured Mr. Callenstein. Foster-Milburn Co., Props., Buffalo, N. Y.

A new electric truck of unusual length is equipped with eight wheels each with a separate motor, and so arranged that the rear four turn automatically with the forward four in steering.

An automatic fire-alarm which can be attached to an ordinary telephone to send a signal to a switchboard operator has been patented by a New Jersey man.

Cotton imports into China last year showed an increase of \$8,750,000 in value.

### MASTER COMMISSIONER'S SALE

MASON CIRCUIT COURT.

Chas. A. Anderson, et al., on Petition Ex-Parte.

Judgment and Order of Sale.

In obedience to a Judgment and Order of Sale in the above styled action, I will, as Master Commissioner, on SATURDAY, FEBRUARY 5TH, 1916 at 2 o'clock p. m., (standard time), proceed, on the premises, near Lewisburg, Mason County, Kentucky, to sell, at public outcry, and to the highest and best bidder, the hereinafter described real estate, in order that the net proceeds from said sale may be divided among the parties thereto entitled, in accordance with their respective rights therein.

Said real estate is bounded and described as follows:

Beginning at an iron pin drove in the ground at the end of a stone fence, Marshall's corner; thence N. 4 1/2 deg., E. 66 poles 11 links to a stone set in the ground between two corner posts, thence S. 83 1/2 deg., W. 137 poles 8 links to a stone set in the ground in angle of wire fence 18 links from end of stone fence; thence S. 26 deg., W. 76 poles 6 links to a set stone; thence N. 63 deg., W. 13 links to the end of stone fence leaving the stone fence all on the Marshall land; thence with the stone fence S. 35 deg., W. 7 poles 2 links to the corner of stone fence on Mill Creek; thence up the creek with the line of stone fence on the outside S. 52 1/2 deg., E. 10 poles; thence S. 43 1/2 deg., E. 4 poles; thence S. 27 deg., E. 17 poles 15 links to where the fence makes a turn, thence S. 42 1/2 deg., E. 6 poles; thence S. 24 deg., E. 20 poles to a set stone at a post by stone fence; thence N. 78 deg., E. 20 poles, 20 links to a set stone by the side of stone fence; thence N. 66 deg., E. 9 poles 15 links to set stone; thence N. 75 deg., E. 23 poles 15 links to set stone; thence S. 47 deg., E. 15 poles 22 links to a set stone at corner of stone fence, Brannon's corner, thence N. 84 deg., E. 80 poles, 19 links to an iron pin drove in the ground in Brannon's line and corner to Marshall; thence N. 3/4 deg., W. 58 poles 12 links to an iron pin set in concrete at the side of stone fence; thence with the stone fence S. 86 deg., W. 9 poles 5 links to the place of beginning, containing 118 7-10 ACRES.

TERMS OF SALE—Said real estate will be sold upon a credit of six (6) and twelve (12) months, in payments of equal amounts. The purchaser will be required to execute bonds for the purchase price, with approved personal security, payable to me as Master Commissioner, and bearing six (6) per cent interest thereon from the day of sale. Said bonds will have the force and effect of Replevin Bonds, with a lien retained therein upon the property sold, in order to secure the payment of the purchase price.

A. G. SULSER,  
Master Commissioner,  
Worthington, Cochran & Browning,  
Attorneys.

### EXPERIENCES

Of Colonel L. M. Maus Given By Him  
In Address At First Presbyterian Church.

Following is the most excellent address delivered by Colonel L. M. Maus, secretary of the State Department of Health, at the First Presbyterian church on Monday afternoon:

It is not generally known, but it is a fact, that tuberculosis or consumption, as it is commonly called, is the most serious health problem in Kentucky and causes one-sixth of the deaths in the state.

More of our people die from consumption than from diphtheria, hookworm, la grippe, pellagra, scarlet fever, typhoid fever and whooping cough besides all of the murders and suicides thrown in. As a matter of fact, one-half of our annual death rate, including that from tuberculosis, results from preventable diseases.

Few people realize the extent of tuberculosis infection in Kentucky, or the enormous sacrifice of human life resulting from this disease. From carefully gathered statistics we find that more than 30,000 people in the state are affected with the Great White Plague, over 5,000 of whom annually pass away.

Kentucky stands third among the states of the Union in the proportion of deaths per 100,000 from tuberculosis. The figures given by the United States census of 1910 were 360 per 100,000, while the percentage in many of the other states ran below 100 per 100,000. We are also informed that Kentucky has the largest percentage of blindness among the states of the Union, a condition due principally to diseases of vice and ignorance.

Many people are still discussing the large number of deaths caused during the Civil war, in which the nation lost 500,000 men, and yet little or nothing is said of the 200,000 men, women and children who die every year in the United States from the Great White Plague.

Should Kentucky stock raisers lose as many fine horses, cattle and hogs each year from preventable diseases as the state loses in human lives from tuberculosis a war-cry would be raised among the stockmen which could be heard from the Bluegrass region to the national capital at Washington.

General ignorance among the masses concerning the spread and prevention of consumption is regarded as one of the principal causes of its prevalence in the state. The United States census of 1910 has shown that Kentucky possesses a larger number of illiterates than any other state in the Union regardless of size or population. In fact in percentage of native white illiteracy, Kentucky stands forty-seventh among the states of the Union.

The financial loss to the state should also be considered in discussing the tuberculosis problem. The actuarial of many of our life insurance companies have placed an average valuation of \$40,000 on the labor of every able-bodied person during the productive period of life, 20 to 60 years. Estimating the average life of the 6,000 consumptives who die annually in Kentucky at 35 years, the state loses \$150,000,000 per year.

Should the value of each adult dying from tuberculosis be placed at \$10,000, and estimate three-fifths of those who die as "grown ups," the state would still lose the princely sum of \$38,000,000 from deaths alone. Besides this enormous sum, an equal amount representing the earning capacity and maintenance of at least 20,000 consumptives, who are unable to work, is lost to the state each year, as well as the cost of caring for the destitute widows and orphans of those who die.

Besides the financial loss to the state and the social and economic issues involved in the relation of tuberculosis to poverty and crime, we still have one sad fact which overshadows all else, the sorrow and human suffering endured by those who are daily dropping out, and the heart aches of the dear ones left behind.

The diagnosis of tuberculosis in its early stages is frequently a very difficult matter. It is only after a careful inquiry into the history of the individual, his surroundings and symptoms, physical examination of all the organs involved, microscopic examination of the blood and sputum, and one of the tuberculin tests, that a possible diagnosis can be made. Hence, an early diagnosis in the rural districts is rarely obtained.

Unfortunately for those who are susceptible to the disease, tuberculosis usually develops slowly and without pain. There are thousands of people in this state of both sexes and of all ages, who are seriously af-

ected with tuberculosis, but are not aware of its existence.

They realize that something is the matter with them, but as a rule ascribe their ill-health to a deep-seated cold, influenza, bronchitis, loss of appetite, a pain in the side, general poor health or something else. Many of such unfortunates continue in their fatal ignorance until it is too late, although living within calling distance of a physician.

Although consumption is one of the oldest diseases on record and easily dates back to the dawn of history, little or nothing was known of its true nature until 1882, when the great investigator, Dr. Koch of Berlin, proved that it was caused by a specific germ or micro-organism. Previous to this period it was generally believed to be transmitted in some mysterious manner from parent to child. It is now definitely known that tuberculosis is conveyed through the sputum of those affected, which contains millions of the germs or seeds, and becomes more dangerous when it dries and turns into dust.

In the form of fine powder, it permeates the air, settles on clothing, blankets, quilts, curtains, draperies, rugs, carpets, dishes, cooking utensils and in fact, enters every nook and cranny where the germs can find lodgment. It is also transmitted directly through sneezing or coughing or from infected boarding houses, hotel rooms, schools, churches, cars, theaters, moving picture shows and to children from the milk of tuberculous cows.

The contraction of tuberculosis depends on a variety of causes which lower the resisting powers of the system. Besides a constitutional weakness, the system may be rendered susceptible through lack of proper nourishment, dark and poorly ventilated rooms, long hours of work, dusty street shops and factories.

Many diseases, such as pneumonia, typhoid fever, hookworm and la grippe weaken the system and lay the foundation for tuberculosis. Intemperance is one of the most prominent causes, while the children of dissipated parents are especially predisposed to the disease. The disease is not transmitted from parent to child, as believed previous to the discovery of the tuberculous germ.

Although tuberculosis is a preventable disease and, with proper care, can be suppressed as easily as weeds in a garden, any campaign for its eradication becomes a difficult and perplexing problem. This is especially true of small towns and villages where we find, as a rule, poorly paid health officers, inactive city and county officials and a strong objection to appropriations for sanitation and health measures.

The Great White Plague is no respecter of classes, color or conditions. It is found in the palace of the king as well as the hut of the peasant, in the homes of the rich and the poor, the saint and the sinner, the educated and the ignorant.

Although tuberculosis is no respecter of classes, it is most generally found in the homes of the poor and the ignorant. I believe we would find 80 per cent of those affected among the poor, ignorant and helpless, and especially among the colored people, were a careful survey of the disease made throughout the state.

I frequently receive letters from such people asking advice and assistance, many of which are sad and pathetic in the extreme. Let me read you one I received only a short time ago:

"Dear Sir: I see in the news where you will send a free copy of a booklet on the home care of tuberculosis. I would thank you so much for a copy. Just lost a sister and brother and have another brother sick with tuberculosis and feel bad myself. Have had a constant hurting under my shoulder for a year or more. Have been to several doctors, but don't get any better."

The great English prime minister, Disraeli, once said: "The public health of the nation was the foundation upon which rests the happiness of the people and the welfare of the state, and that reform toward the improvement of the public health must ever take precedence over all other things."

When we consider the serious health conditions existing in many parts of Kentucky as a result of hookworm, pellagra, trachoma and especially tuberculosis, which carries off thousands of our population every year, a radical awakening of our Assembly will become necessary before the state can enjoy a full measure of prosperity, or the people the happiness and welfare to which they are entitled.

A great many of our states and large cities have been actively engaged in the campaign against tuberculosis during the last ten years, with strikingly beneficial results. It is also a fact that in proportion to the energy displayed and the money spent, there

has been a corresponding decrease in the disease.

During the last decade, tuberculosis has also received a large amount of consideration at the hands of the various state legislatures throughout the country. Laws, good and bad, have been enacted in forty-five states.

Among these laws are provisions for the construction of state institutions, hospitals, sanatoria, camps and colonies, and funds for their maintenance; county or district sanatoria with state subsidy; for the creation of tuberculosis commissions; for the registration and segregation of consumptives; health regulations for the government and management of those infected; disinfection of boarding houses, hotels and sleeping cars used by the tuberculous; inspection of schools, etc.

In recent years a number of states and cities have spent large sums for the construction of suitable public institutions for the cure of inebriates, as well as the advanced cases. Chicago has recently expended \$5,000,000, New York \$5,000,000, Pennsylvania \$4,000,000, Massachusetts \$2,000,000, Ohio \$2,000,000, Connecticut \$500,000, and twenty other states have averaged \$25,000 each in this cause.

In 1912 the State Legislature of Kentucky passed an act organizing a State Tuberculosis Commission and appropriated \$15,000 per year for carrying on its work. The law provided for the following kinds of activity: The study and investigation of tuberculosis and its prevalence within the state, education of the people concerning the cause and prevention of the disease, co-operation with public and local boards of health engaged in tuberculosis work, the encouragement of county or district sanatoria throughout the state, etc.

Since its existence the commission has accomplished a large amount of publicity and educational work through its health car and moving picture exhibits, lectures, organizing nurses, pamphlets, leaflets and newspaper articles. The tuberculosis exhibit car was sent to hundreds of the most important towns and villages along the line of railroads, and the automobile moving picture health exhibit to points inaccessible by rail.

So far, no county or district sanatoria have been erected in accordance with the provisions of the act, although the commission has succeeded in securing a favorable referendum vote in Fayette, Henderson and Christian counties for the construction and maintenance of such institutions. Louisville has provided a 160-bed sanatorium at Waverly Hills for the consumptives of Jefferson county; Paducah a hospital of ten beds, and the charitable people of the state a pay institution at Hazelwood near Louisville.

The profession of medicine has discovered the cause of tuberculosis and taught us the way and means to prevent it. It would seem that the Great Creator had placed this knowledge within our reach in order that we might use it in working out our own salvation.

### USE OF DRUGS DIMINISHING.

It has been stated that the expense for drugs at the Massachusetts General Hospital has been reduced 50 per cent in ten years,—but the demand for such non-secret, reliable remedies as Vinol is largely on the increase. Our local druggist, Pecor Drug Company, goes so far as to guarantee Vinol for weak, run-down conditions, chronic coughs, colds and bronchitis, because one gets in Vinol a combination of the three most famous tonics, iron for the blood, the healing medicinal extractives of fresh cod livers, and the nourishing properties of beef pepton, all in a delicious native wine.

### AROUND THE WORLD.

Mexicans eat salt with oranges.  
Mica deposits sufficiently large to develop exist in twenty states.

Pittsburg steel mills pay out one million dollars a day in wages.

Glass beads have been found on mummies over 3,000 years old.

Rings instead of balls feature machinery bearings invented by a French scientist.

In some parts of Portugal the spring waters are so hard as to be quite useless for many purposes.

The Green county (Wis.) "poor farm" is operated by the inmates of the insane asylum of that county.

The United States Bureau of Standards has developed a thermo-electric test for the purity of platinum.

The Chilean government is devoting much time to the developing of the coal mines of that country, some of which extend three miles under the ocean.

Shoes with quickly removable soles and heels have been invented in France for railroad men so that they can escape should their feet be caught in tracks.

An automobile tire of British invention that is said to be almost as resilient as rubber is made of several metal bands, separated by aluminum blocks.

A vacuum cleaner for the teeth operated by a small electric motor has been invented.

### FARM FOR SALE

We have for sale a farm of 144 acres, located on Maysville and Mt. Carmel pike, about three miles east of Orangeburg. The improvements on this farm consist of one six-room house, Tenant House of four rooms, two Tobacco Barns, usual Outbuildings with both sets of improvements. About 120 acres of this farm is now in grass, some of which is Bluegrass. Here is a real bargain in land, and a place that any good farmer can make money on. Come in and let us tell you about it.

LOAN AGENT

Farmers & Traders Bank Building  
Maysville, Ky.

## RUSH

Or no rush doesn't make any difference with us.

You take no chances when you bring your Tobacco to us.

We are fully prepared to

Shelter It,  
Unload It,  
Sell It.

Last week was the rush week of the season: but every load that came to us was

Well Cared For,  
Well Handled  
and  
Well Sold.

We did not have a dissatisfied customer and not a single wagon remained outside our Houses for a moment.

We are prepared to do what warehousemen should be prepared to do, and we do only what they should do, to-wit:

### Sell Tobacco.

We are not engaged in Speculating. That is another and different kind of business. If we wanted to buy your Tobacco, we would, of course, want to buy it low, so we could later sell it at a profit. We give all our efforts to the

### Growers of Tobacco

and are running our houses on a plan of co-operation that best serves their interests.

When you come to us you are sure of the BEST and you have lost something on every load that you fail to sell at either the

Home, Central, Farmers, Planters or Independent Warehouses.

### Deafness Cannot Be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free. F. J. CHENEY & CO., Toledo, O. Sold by Druggists, 75c. Take Hall's Family Pills for constipation.

On the House of Parliament in London is a clock, the striking part of which takes one-half a day to wind up. The clock has four dials—one on each side of the square tower.

### COUGHLIN & COMPANY

17 East Second Street, Maysville, Ky.

### VERY BUSY

We have been since the first of the year, but now the offerings having somewhat decreased, we hope to be able to take care of all who want to sell their Tobacco with us.

We are very sorry that so many were compelled to go elsewhere during the rush after making an effort to get in our house, and desire to thank them as well as those for whom we have made sales.

We feel the policy we have adopted of good treatment to both buyers and sellers without knocking our competitors, but attending strictly to our own business has contributed to our wonderful success.

### GROWERS WAREHOUSE COMPANY
